Notes to the “Fall 2009 Cost of Course Materials” worksheet.

This list combines information from the Course Materials Office (CMO) and the Harvard Coop (the “Coop”). While the CMO date is accurate, we cannot attest to the accuracy of the Harvard Coop listings.

Harvard Coop. The Harvard Coop pricing is taken from a report provided to the Course Materials Office (CMO) by the Harvard Coop dated May 28, 2009. Used books available through the Harvard Coop are sold to students at 25% less than the prices listed.

There has been a trend for faculty to list recommended and even required books on their syllabi, but without ordering them through the Coop since they are readily available for order online or elsewhere, often at a lower price. Obviously, this information would not appear on the Coop list.

Rarely, a course may list several required texts. However, students are only expected to read one of those titles. The idea is to give students a choice or to assign the different titles to different groups of students within the class. Clearly, such an arrangement gives the impression of higher than actual costs to students in that class. You should consult with the syllabus for further details.

You can check the syllabus by accessing, with your login name and password, the CMO’s syllabus archive at <http://www.hks.harvard.edu/cmo/syllabusarchive/index.htm>.

The # columns. The # column information represents the number of packets or books distributed in the previous column’s total. For example, API302 lists a total of \$154.05 in required packets followed by the number five. The number five notes the number of separate packets offered to students.

Online packets. Online packets, or what the CMO calls “Paper Copy of Online Readings”, contains just those readings, required or optional, that can also be found online. The purpose of this type of packet is to give students the convenience or option of a hard copy of those readings or to go online to obtain them without charge. However, a course that does not use “Paper Copy of Online Readings” packets should not be interpreted to mean that the course did not post or link readings from the course web site. Indeed, some courses no longer offer packets since all the readings can be posted or linked through the course web page.
