

## Social Network Citation Patterns

David Lazer  
Ines Mergel  
Allan Friedman

This figure plots the citation patterns of social network papers published in 2005 in the American Journal of Sociology and the American Sociological Review. The squares correspond to the cited papers, where only papers cited at least twice are shown. The black squares are from the social sciences, and pink squares from mathematics and physics. We excluded all isolates. Notably, 22% of the citations listed are from mathematics and physics. Further, *eight out of eleven* of these papers cite work from mathematics and physics, where Watts and Strogatz 1998 and Watts 1999 are the most cited (six) works.

Figure is from Lazer/Mergel/Friedman (available at [www.ksg.harvard.edu/netgov](http://www.ksg.harvard.edu/netgov)).
