

Appendix A About the Authors

Jeannine Cavender-Bares is a biologist at the Smithsonian Environmental Research Center in the United States and an Adjunct Faculty Member at Georgetown University. Her research focuses on plant physiology and evolution and the ecological impacts of global change.

William C. Clark is a professor at Harvard's Kennedy School of Government in the United States. His research focuses on how technical information mediates the interactions of environment, development, and security concerns in international affairs.

Ellis B. Cowling is a forest biologist at North Carolina State University in the United States. His research focuses on the response of terrestrial and aquatic ecosystems to human-induced changes in the chemical climate of North America and Europe.

Nancy M. Dickson is a Senior Research Associate at Harvard's Kennedy School of Government in the United States. Her research explores the role of assessment as a bridge between science and policy and focuses on large-scale environmental change.

Gerda Dinkelman is a political scientist. She works for the Advisory Council for Science and Technology Policy (AWT), an advisory body to the Dutch government.

Rodney Dobell is Professor of Public Policy at the University of Victoria in Canada. His current research focuses on citizen agency and institutions of government in shaping the flow of knowledge into public or individual action.

Renate Ell is a freelance science journalist working with German press and radio on environmental topics. She is also an adjunct research assistant at the Wuppertal Institute for Climate, Environment, and Energy.

Adam Fenech is an Associate Faculty Member at the Institute for Environmental Studies at the University of Toronto, and a Senior Science Advisor at the Meteorological Service of Canada.

Alexandre S. Ginzburg is a Senior Research Fellow at the Institute of Atmospheric Physics at the Russian Academy of Sciences. His research focuses on urbanization, urban climate, and environment. He is a professor of

climate dynamics at the International University in Moscow.

Elena Goncharova is a journalist in Russia. She worked for many years for the Russian Press Agency "News" and now writes for several Russian magazines and newspapers on social and economic issues.

Peter M. Haas is a professor of political science at University of Massachusetts at Amherst in the United States. He studies international environmental governance and the interplay of international institutions and scientific knowledge in shaping how states address transboundary environmental threats.

Éva Hízsnyik is an economist at the Budapest Institute for Environmental Studies in Hungary. Her work is related to methodologies of integrated environmental assessments and their applications in climate change and other global environmental issues.

Michael Huber is employed at the Institute of Sociology at the University of Hamburg in Germany. His research focuses on European regulatory policy making in the field of the environment and problems of organizational learning.

Peter Hughes is Senior Lecturer and Programme Leader for Environmental Studies at the University of Sunderland in the United Kingdom. His research and teaching focus on the relationship between environment and development processes from local to global scales.

Jill Jäger is Executive Director of the International Human Dimensions Programme in Germany. Her research focuses on the design of assessment processes. She has a strong interest in developing effective interdisciplinary and international research projects dealing with global environmental issues.

Marc A. Levy is Associate Director for Science Applications at the Center for International Earth Science Information Network (CIESIN) at the Columbia University Earth Institute in the United States. His research is on institutional effectiveness and environment-security connections.

Angela Liberatore works in the Research Directorate General of the European Commission in Belgium. She focuses on the research-policy interface, environmental policy, European governance and citizenship, and new models of development, and is the author of a book on Chernobyl.

Diana Liverman is Professor of Geography and Director of the Latin American Studies Program at the University of Arizona in the United States. Her research focuses on the social causes, consequences, and policy responses to environmental change in Latin America.

Justin Longo is a Ph.D. student at the University of British Columbia in Canada. His current research focuses on the validity and relevance of policies as perceived by the individuals whose compliance with the intentions raises important questions for implementation.

David McCabe is a Ph.D. candidate in the Department of Political Science at the University of Massachusetts at Amherst in the United States. His dissertation focuses on the role of new information on state interest formation and international collaboration to limit chemical warfare.

Donald Munton is professor and chair of the International Studies Program at the University of Northern British Columbia in Canada. His research focuses on international environmental issues and the relationship between science and policy making.

Elena Nikitina is a senior researcher at the Institute of World Economy and International Relations at the Russian Academy of Sciences. Her research is on domestic implementation and effectiveness of international environmental agreements, particularly in Russia.

Karen L. O'Brien is a senior research fellow at the Center for International Climate and Environmental Research-Oslo (CICERO) at the University of Oslo in Norway. Her research focuses on climate change impacts and adaptations, with an emphasis on vulnerability to climate change.

Edward A. Parson is Associate Professor of Public Policy at Harvard's Kennedy School of Government in the United States. His research examines international environmental policy, institutions, and negotiations.

Vladimir Pisarev is a Senior Research Fellow at the Institute of USA and Canada Studies at the Russian Academy of Sciences. He is interested in sustainable development, environmental security in U.S. policy, and Russian-American relations.

Ruud Pleune is a staff member of Waterpakt, the Dutch water protection organization. His main interest is the relation between values and action in strategies of

environmental actors. He was affiliated with Utrecht University.

Miranda A. Schreurs is an Assistant Professor in the Department of Government and Politics at the University of Maryland at College Park in the United States. Her research addresses national policy making in response to global environmental issues, particularly in Japan and Germany.

Peter Simmons is Lecturer in Environmental Risk in the School of Environmental Sciences, University of East Anglia. His research focuses on the sociocultural dimensions of public and institutional responses to technological and environmental risk.

Simon Shackley is a lecturer in environmental management at the School of Management at the University of Manchester Institute of Science and Technology in the United Kingdom. He is interested in the science-policy interface and regional climate change impacts and adaptation.

Heather A. Smith is an Assistant Professor in International Studies at the University of Northern British Columbia in Canada. Her work focuses on Canadian foreign policy and the issue of climate change.

Vassily Sokolov chairs the Department of Canada at the Institute of USA and Canada Studies at the Russian Academy of Sciences and is CIS Academic Director for International Program Leadership for Environment and Development. He is interested in environmental management and economics.

Ferenc L. Tóth is Associate Professor at the Department of Economic Geography at the Budapest University of Economic Sciences in Hungary. His research activities cover economic and policy dimensions of global environmental change, especially climate change.

Jeroen van der Sluijs is a research associate and lecturer at the Department of Science, Technology, and Society of Utrecht University in The Netherlands. His main research area is the management of uncertainties and values in integrated assessment of climate change.

Josee van Eijndhoven is director of the Rathenau Institute, the Dutch national organization for technology assessment. The institute focuses its activities on assessment of information and communication technology, biotechnology, and environmental issues.

Claire Waterton is a lecturer at the Centre for the Study of Environmental Change at Lancaster University in the United Kingdom. Her research interests center around science and the relationship between scientific knowledge and decision making in environmental policy.

Cor W. Worrell is a chemist at the Department of Science, Technology, and Society at the University of Utrecht in The Netherlands. His research focuses on risk assessment and risk communications, particularly on the implementation of Dutch governmental risk policy.

Brian Wynne is Professor and Director of the Centre for the Study of Environmental Change at Lancaster University in the United Kingdom. He is interested in the ways in which scientific knowledge about environmental issues is shaped and understood by scientists, policymakers, and the public.
